Education

University of Texas at Austin Master's in Computer Science *Specialization: Machine Learning* Jan 2023 — Dec 2024
GPA: 3.5/4.0 | Relevant Courses: Natural Language Processing, Advanced Linear Algebra for Computing, Reinforcement Learning, Machine Learning, Operating Systems, Quantum Information Sciences

University of South Florida Bachelor's in Computer Science Aug 2019 — Dec 2022
GPA: 3.5/4.0 | Relevant Courses: Natural Language Processing, Intro to AI, Computational Geometry, Database Design, Quantum Computing

Skills

Languages	Fluent: Python, C++, C, SQL, BASH | Intermediate: Java, MATLAB
Frameworks & Libraries	PyTorch, Numpy, Pandas, SnowSQL,AWS, C++ STL, Sklearn, Matplotlib, Tensorflow, PostgreSQL, GIT

Work Experience

Graduate Teaching Assistant **Aug 2024 — Dec 2024**
University of Texas at Austin *Austin, TX*
- TA for Natural Language Processing
- This course covers models from the genesis of NLP to modern architectures
- Responsible for holding office hours and grading
- Responsible for teaching a lecture to a class of over 80 students & grading student assignments

Data Engineer Intern **May 2024 — Aug 2024**
Toyota Financial Services *Plano, TX*
- Reduced the time it takes to develop and deploy a new data pipeline from hundreds of hours to minutes
- Created a script in Python to generate new pipelines while cleaning metadata
- Tested this script on over 1300 individual tables, ingestion, and consumption pipelines
- Wrote queries to generate specific lists of table names to be transferred
- Presented my project to the management team
- Leveraged Python, Snowflake, SQL, Github, Jenkins, & AWS

Undergraduate Research Assistant **Nov 2021 — Aug 2022**
University of South Florida College of Computer Science & Engineering *Tampa, FL*
- Conducted research on classical and quantum networking to help secure vulnerabilities in healthcare network infrastructures
- Read, summarized, and cultivated relevant papers to master state-of-the-art quantum computing networking techniques.
- Created classical and quantum network simulations using NS3 and SeQuEnCe network simulators
- Experimented with TCP/IP and UDP/IP and compared performance to using a quantum acknowledgment channel
- Measured performance by tracking the time it took to transmit 10,000 packets on a simulated busy network
- Collected and Analyze data from our experiments and communicated them with my advisor.

Web Developer **Nov 2021 — Dec 2021**
The University of South Florida Quantum Initiative *Tampa, FL*
- Was tasked to build and designing an easy to use and functional website strictly in HTML & CSS
- Created a website that is fully ADA compliant, search engine optimized, and multi-device compatible
- https://quantum.usf.edu/index.html

Projects

NLP Improvement Paper **November 2023 — December 2023**
University of Texas at Austin *Austin, TX*
- Led the creation of an academic replication paper focused on enhancing and scrutinizing the performance of a cutting-edge model
- Conducted meticulous data analysis on the SNLI dataset, identifying challenging instances for the model
- Analyzed and found dataset artifacts in the data set and corrected for them in model training
- Outperformed the results reported in the original paper being replicated
- Executed the project proficiently with key technologies, including Python, Jupyter Notebooks, Huggingface, and PyTorch

Philosophical Similarity **July 2023 — Aug 2023**
Independent Project *Austin, TX*
- Collected, cleaned, and analyzed classic philosophical texts using GPT-2
- Used embeddings learned from GPT-2 to embed an entire text into a single vector
- Used the vector to compare similarities between other texts in order to find a lineage of similarities between philosophies
- Created using Python Jupyter notebook, pytorch, numpy, pandas, and matplotlib, available on github as NLP-analysis
